

Wireless Refresh RFP Questions: As of 2/11/2019

FIRST, A POINT OF CLARIFICATION:

There was a typo on the submission date for technical questions. It should have been February 14, 2019 (NOT February 4, 2019).

- Are you open to manufactured equipment other than Aruba?
Any vendor is welcome to submit their proposed solution. All manufacturers and options will be considered.
- The bid mentions cabling, is cabling for all or any of the access points locations needed?
Cabling: to my knowledge there isn't any cabling needed. I put that in the RFP to cover us should there be a need.
- Do you have a count of how many AP's are wall mount, drop ceiling mount, special mount?
Mounts: I do not have a number for this. I understand different manufacturers have different ways for mounting their product. However, if you'd like to count up how many your solution would require, we could do so during the walkthrough.
- The wireless controller. You say SOFTWARE UPDATE, does this mean you have a 7200 onsite currently?
Controllers: yes, we have 2 onsite. One at the MS and one at MOHS. Software update will be to bring them on to the current version which supports the most current Aruba aps.
- Can we get a walk through scheduled?
Please provide me with a few dates and times that work for you.
